Airbnb, Inc. (ABNB)

Consumer Discretionary – Hotels, Resorts and Cruise Lines

November 3, 2025

Stock Rating: Buy

Investment Thesis

We rate Airbnb (ABNB) as a **BUY** with attractive upside profile as it expands beyond short-term rentals into hotels and new travel services. The push into the \$370 billion hotel market and the redesigned app featuring Experiences should drive steady growth, while global event partnerships provide near-term tailwinds. Despite execution and competitive risks, we see about 21% upside.

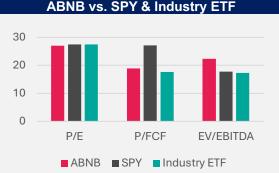

Drivers of Thesis

- Management is aggressively expanding into the \$370 billion global hotel market, which is nearly twice the size of the alternative accommodations market, creating a major new growth avenue
- Airbnb's redesigned app integrates AI and "Experiences" creating a more complete travel platform that could drive modest growth.
- Global event partnerships with FIFA, the Olympics, and Lollapalooza should create short-term booking surges, driving near-term revenue growth.

Risks to Thesis

- Core short-term rental growth could slow faster than expected before the hotel segment reaches scale
- Management's execution on the hotel expansion remains uncertain, and the shift could alienate Airbnb's core host community
- Strong competition from Booking Holdings and Expedia may limit Airbnb's share gains in both alternative accommodations and hotels

Company Description

Airbnb runs a global platform that connects hosts and guests for places to stay and things to do. The company was founded in 2007 and is based in San Francisco. It now has over 4 million hosts across more than 220 countries and 100,000 cities. Most of Airbnb's business comes from short-term rentals, but it also offers "Experiences," which are activities hosted by locals, like tours or classes.¹

Airbnb makes money by charging service fees to both guests and hosts based on the total booking amount. This asset-light model lets the company scale quickly without owning properties, which helps support high margins and strong cash generation. In recent years, management has been expanding beyond traditional home rentals by adding hotel listings and relaunching Experiences. The goal is to reach more types of travelers and reduce its exposure to regulations that limit short-term rentals in major cities.

Overall, Airbnb benefits from a well-known brand, a large network of hosts, and a loyal customer base. These strengths should help it continue growing as travel demand stays strong globally.

North America Segment

North America is Airbnb's largest market, making up about 45% of total revenue in 2024. Since 2021, the segment has grown at an average annual rate of around 33%, driven by strong domestic travel demand and steady pricing power across U.S. and Canadian markets.

We forecast North America revenue to grow roughly an average of 8% annually through 2034, reaching \$8 billion by the end of the period. Growth is expected to moderate as the region matures, but performance should remain stable thanks to resilient leisure travel, continued ADR increases, and the rollout of Airbnb Services and Experiences within the U.S. market.

Our model assumes modest ADR expansion and stable occupancy levels, supported by strong brand loyalty and upcoming events like the 2026 FIFA World Cup, which should boost demand across major U.S. cities. Over time, North America's share of total revenue is expected to slightly increase from 45% to about 49%, reflecting faster growth in LATM and Asia Pacific rather than weakness in the core U.S. market.

EMEA Segment

The EMEA region (Europe, Middle East, and Africa) is Airbnb's secondlargest market, representing roughly 37% of total revenue in 2024. Since 2021, EMEA revenue has grown at an average annual rate of about 45%, supported by the COVID recovery and opening of crossborder travel.

We forecast EMEA revenue to increase 4% on average annually through 2034, reaching \$5.3 billion by the end of the forecast period. Growth is expected to normalize and as Airbnb benefits from higher ADRs in urban destinations and extended stays across popular tourist markets like France, Italy, and Spain.

Our model assumes sustained ADR growth and moderate occupancy gains as international travel improves and macro pressures ease. The introduction of Airbnb Services and Experiences in European markets should also help strengthen monetization per booking. While regulatory changes around short-term rentals remain a key risk, overall EMEA momentum is strong, and the region is expected to become an increasingly important contributor to Airbnb's long-term growth mix.

Latin America Segment

Latin America represents one of Airbnb's smaller but faster-growing regions, accounting for about 9% of total revenue in 2024. Since 2021, the segment has expanded at an average annual rate of around 43%, driven by rising tourism across Mexico, Brazil, and key coastal destinations. Growth has also been supported by an increase in domestic travel as regional economies recover and digital adoption among hosts improves.

We project Latin America revenue to rise on average, 8% annually through 2034, reaching \$1.6 billion. This strong growth reflects a combination of expanding middle-class travel demand, continued urbanization, and improved infrastructure for tourism. Airbnb's localized marketing and host-support initiatives in major Latin American cities are also helping attract new supply and sustain booking momentum.

Our model assumes stable ADRs with moderate occupancy gains, as affordability remains a competitive advantage relative to hotels. Currency volatility and uneven economic performance across markets remain near-term risks, but Latin America should continue to outpace the company's global average growth rate, gradually increasing its share of total revenue over time.

Asia Pacific Segment

Asia Pacific is Airbnb's smallest but highest-growth region, making up about 9% of total revenue in 2024. Since 2021, the segment has grown at an average annual rate of roughly 31%, driven by the recovery of international travel and the reopening of key markets such as Japan, Australia, and parts of Southeast Asia.

We forecast Asia Pacific revenue to grow at average rate of 9% annually through 2034, reaching \$1.6 billion by the end of the period. Demand in this region is expected to benefit from a rebound in cross-border tourism, the rising popularity of alternative accommodations among younger travelers, and Airbnb's continued expansion into new cities and resort destinations.

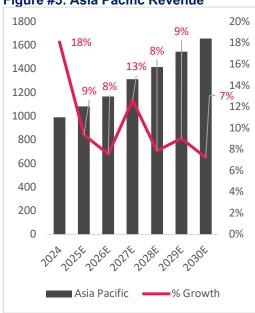

Our model assumes steady ADR growth and gradual occupancy improvement, supported by increasing air connectivity and regional events that draw international visitors. While geopolitical tensions and regulatory restrictions in certain markets pose risks, Asia Pacific remains a key long-term opportunity for Airbnb as it continues to diversify its global revenue base.

Figure #9: Debt Maturity Analysis

Cost Structure Analysis

Airbnb's main expenses stem from payment processing fees, including merchant charges and chargebacks, along with third-party data center costs, research and development, and employee compensation. These costs are largely variable, so in our model we forecast each as a percentage of revenue. As the company scales and integrates more AI-driven automation, we expect efficiency gains that gradually improve margins over time.

In our model, EBITDA margins increase from 24% in 2024 to 28% by 2029, staying steady by 2034. This improvement is driven by higher booking volumes and rising ADRs, which allow a greater share of revenue to flow through to earnings. We assume payment and labor costs grow roughly in line with revenue, while technology and infrastructure expenses decline modestly as automation reduces manual workloads.

The main question is whether Airbnb can expand margins faster than expected as it scales its hotel and services businesses. Our forecast takes a conservative approach. If management executes successfully on AI adoption and product diversification, there is meaningful upside potential to our long-term margin assumptions.

Additional Company Analysis

Airbnb earns revenue mainly through service fees on bookings made through its platform. Guests pay a small percentage fee, and hosts pay a separate host fee, together forming the company's take rate. Airbnb doesn't own or operate properties.

Airbnb stands out through its unique supply base, offering millions of listings owned by individual hosts. Its brand recognition, network effects, and direct traffic give it stronger loyalty and lower marketing costs than peers like Expedia or Booking.

Airbnb's asset-light model produces strong margins, and consistent free cash flow. The company's long-term success depends on maintaining host and guest engagement while expanding into hotels and experiences. Compared with peers, Airbnb's model is more scalable and flexible, supporting durable growth as travel demand evolves.

Debt Maturity Analysis

Airbnb has total debt outstanding of about \$2.3 billion, representing a low debt-to-value ratio of roughly 2.4% as of fiscal year-end 2023. Short-term debt and the current portion of long-term debt total \$61 million, while long-term debt makes up the remaining \$2.24 billion. This shows Airbnb maintains a conservative balance sheet with limited financial leverage.

About \$2.0 billion of the company's debt consists of 0% convertible senior notes due 2026, which carry no cash interest payments. Interest expense related to these notes is minimal since it only reflects the amortization of issuance costs. The notes include a

convertibility feature and a capped call arrangement, which help limit potential share dilution if conversion occurs.

Management has flexibility in meeting these obligations through cash generated from operations, new debt issuance, or available borrowing capacity under its credit facility. Overall, Airbnb's capital structure remains healthy and supports the company's focus on maintaining liquidity while investing in long-term growth.

ESG Analysis

Environmental

Airbnb's environmental impact is smaller than most travel companies because it doesn't own or run the properties listed on its platform. Instead, it focuses on encouraging hosts to make their homes more energy efficient and reduce waste. The company also works with cities and nonprofits to promote sustainable tourism and lessen the impact of travel on local communities. Airbnb tracks emissions from its offices and data centers, but it hasn't set a specific net-zero goal yet. Making progress on emissions and reporting could help its reputation with investors.

Social

Airbnb operates in more than 220 countries and allows people to earn income by renting out their homes or rooms. The company provides training and safety resources for hosts, along with programs that fight discrimination and improve accessibility for guests. Still, Airbnb faces challenges related to local housing markets, neighborhood safety, and how short-term rentals affect communities. Managing these issues well will be important for keeping trust with both hosts and guests.

Governance

Airbnb is led by co-founder and CEO Brian Chesky, and most of its board members are independent. The company has a dual-class share structure that gives Chesky extra voting power, which helps maintain leadership stability but limits shareholder influence. Management has focused on staying profitable while expanding into hotels and experiences. Keeping good transparency and oversight will matter as Airbnb continues to grow and add new business lines.

Recent Developments

Recent Earnings Announcement

Airbnb reported second quarter 2025 revenue of \$3.10 billion, up about 13% year over year, with adjusted EPS of \$1.03, beating consensus estimates of roughly \$0.94. Adjusted EBITDA totaled around \$1.0 billion, representing a margin near 34%. Growth was driven by a 7% increase in Nights and Experiences Booked and a modest rise in average daily rate (ADR).⁵

Management highlighted that travel demand remained steady globally, especially across EMEA and Asia Pacific, though they issued more cautious guidance for the second half of 2025. The company expects slower growth and potential margin pressure as comparisons become tougher later in the year. Despite this softer outlook, the

quarter's performance exceeded expectations and reflected ongoing strength in bookings, pricing, and overall platform engagement.⁵

Board Member Selling Shares

On October 27, 2025, Airbnb co-founder and director Joseph Gebbia sold 236,000 shares of Airbnb stock for about \$30.3 million. After the transaction, he still controls roughly 470,000 shares. Gebbia remains listed as a 10% owner and continues to serve on the company's board.

While insider selling doesn't always indicate a negative outlook, large and repeated sales can sometimes signal reduced confidence. Gebbia has gradually reduced his ownership since stepping back from day-to-day operations in 2022.¹¹

Industry Trends

Stable Booking Behavior and Resilient Demand

In Q1 2025, Airbnb's overall booking patterns stayed mostly the same as last year across regions, travel types, and trip lengths. Average booking windows also remained steady. In the U.S., where most travel is domestic, the company saw more bookings being made for trips over a month in advance. Higher-income travelers have been largely unaffected by the broader economic environment, with demand at the high end of the market staying strong. Airbnb also noted no major shift toward cheaper listings or shorter stays.²

Shift Toward Experience-Driven Travel

U.S. travelers are increasingly looking for trips that are unique and focused on experiences rather than traditional vacation spots. This trend shows how travel is becoming more about expressing personal values and identity. At the same time, growing interest in sports tourism and major upcoming events like the 2026 FIFA World Cup and 2028 Olympic Games are creating new opportunities for growth in the hospitality industry. Even with overall travel levels leveling off and some economic or local regulatory challenges ahead, the sector is finding fresh ways to expand.³

Markets and Competition

ABNB's Peer Group

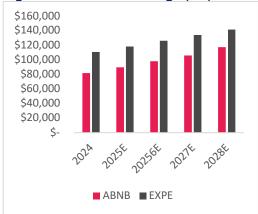

Airbnb's peer group includes Expedia Group (EXPE), Booking Holdings (BKNG), Marriott International (MAR), and Hilton Worldwide Holdings (HLT). We selected these peers because they represent the major players across both online travel agencies (OTAs) and traditional hotel operators, which together define the broader global lodging and travel industry. Expedia and Booking provide the most direct comparison on the digital distribution side, while Marriott and Hilton capture the traditional hotel segment that Airbnb is looking to compete with through its hotel integration efforts.

Figure #14: EV/EBITDA Comparison

Source: FactSet

Figure #15: Gross Bookings (\$M)

Source: FactSet

Figure #16: EV/EBITDA Comparison

Source: FactSet

All four companies have global footprints and benefit from strong brand recognition, and scale advantages. While booking and Expedia dominate in online reservations and paid traffic channels, Marriott and Hilton maintain leadership in room supply and franchise-based profitability. Airbnb sits between these models its growing hotel partnerships position it as a hybrid competitor across both categories. This mix makes the selected peer set appropriate for evaluating Airbnb's valuation.

Expedia Group (EXPE) – 32.82% YTD

Expedia Group (EXPE) is a leading online travel agency headquartered in Seattle, Washington, with operations across North America, Europe, and Asia-Pacific. The company owns several major brands, including Expedia.com, Hotels.com, Orbitz, Vrbo, and Travelocity, giving it a wide range of exposure across lodging, air travel, and vacation rentals. Expedia's scale and brand portfolio provide strong visibility into global travel demand, though the company remains more dependent on paid traffic than some peers.⁷

In FY2024, Expedia generated about \$13.7 billion in revenue with an EBITDA margin of 17.41%. The company's profitability has improved in recent years as it reduced costs and invested in Al-driven personalization tools. As of September 2025, Expedia had a market cap of \$32.9 billion and an enterprise value of \$32.2 billion, trading at 11.73x forward EV/EBITDA. Expedia is an important peer for Airbnb given its shared focus on online travel bookings and vacation rentals, though Airbnb's asset-light model gives it higher margins and stronger brand loyalty.⁷

Booking Holdings (BKNG) -4.03% YTD

Booking Holdings (BKNG) is the world's largest online travel agency, headquartered in Norwalk, Connecticut. It operates well-known brands such as Booking.com, Priceline, Agoda, and Kayak, with strong exposure to Europe and Asia. The company's high share of direct traffic and strong brand recognition have supported superior margins and profitability compared to most competitors.⁸

In FY2024, Booking generated approximately \$23.8 billion in revenue with an EBITDA margin of 35.1%, among the highest in the travel sector. As of September 2025, the company had a market cap of 55.5 billion and an enterprise value of \$155.9 billion, trading at 15.64x forward EV/EBITDA. Booking serves as Airbnb's most direct competitor in the OTA space, though Airbnb's unique supply base of alternative accommodations differentiates its offering and creates lower capital intensity.8

Marriott International (MAR) - 6.06% YTD

Marriott International (MAR) is the largest global hotel operator, headquartered in Bethesda, Maryland, with over 30 brands including Marriott, Sheraton, Westin, Ritz-Carlton, and W Hotels. The company operates an asset-light franchise and management model, allowing it to generate stable cash flows and strong returns on capital with limited balance sheet risk. Marriott's large loyalty

program, Marriott Bonvoy, provides a key competitive advantage and helps maintain customer retention across its global portfolio.⁹

In FY2024, Marriott reported revenue of about \$25.1 billion and an EBITDA margin of 17.4%. As of September 2025, the company had a market cap of \$80.1 billion and an enterprise value of \$95.1 billion, trading at 21.93x forward EV/EBITDA. Marriott is a relevant peer for Airbnb because it represents the traditional hospitality model Airbnb is increasingly competing with through its expansion into hotels and premium stays.⁹

Hilton Worldwide Holdings (HLT) - 11.05% YTD

Hilton Worldwide Holdings Inc. (HLT) is a global hotel operator and franchisor headquartered in McLean, Virginia. The company manages a portfolio of 22 brands that span the luxury, premium, and midscale segments, including Hilton Hotels & Resorts, Waldorf Astoria, Conrad, and DoubleTree. Hilton operates primarily under an asset-light franchise model, allowing it to earn stable fee income while minimizing exposure to property-level risk. Its global footprint and strong loyalty program, Hilton Honors, provide consistent occupancy and pricing power across diverse regions.¹⁰

In FY2024, Hilton generated about \$11.2 billion in revenue with an EBITDA margin of 22.5%. The company's profitability benefits from high franchise fees and continued growth in international hotel openings. As of September 2025, Hilton had a market cap of \$64.9 billion and an enterprise value of \$75.4 billion, trading at 27.43x forward EV/EBITDA. Hilton serves as a relevant peer for Airbnb because it represents the traditional lodging model Airbnb is expanding into through its hotel integration strategy.¹⁰

Economic Outlook

Reservation Lead Times

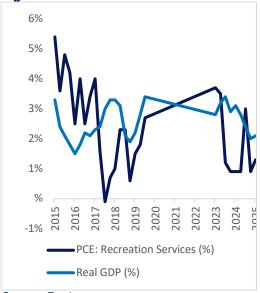

When looking at reservation lead times, booking behavior has clearly shifted. Travelers are increasingly waiting until the last minute to book. In August 2023, just 16% of U.S. reservations were made within five days of check-in. By January 2025, that share had nearly doubled to 31%, and sits at 24% in May.⁴

Meanwhile, the share of bookings made well in advance—both in the middle and long lead time categories—has declined, indicating a broader trend toward shorter planning windows.

Shortening lead times is widespread in the U.S., perhaps as a result of growing consumer comfort with booking short-term rentals and rising economic and policy uncertainty. Every location type has seen a decline in median lead time over the past 12 months, though the extent varies. Urban markets experienced the sharpest drop at -8.4% year-over-year, while Coastal Resort markets saw a more modest decline of -3.5% YOY.⁴

Consumer Confidence

Figure #20: PCE vs Real GDP

Source: Fred

Figure #21: GBV per Night and Experience (ADR)

Figure #22: Nights and Experiences Booked (NEB)

Lately, the consumer discretionary sector has started to show some weakness as younger, educated Americans pull back on spending. Chipotle's stock fell 23% after management said customers in their late twenties to early thirties are dealing with unemployment, student loan payments, and slower wage growth. Cava and Sweetgreen have also each lost over half their value this year, showing how sensitive this group has become to price.⁵

Unemployment for 20–24-year-olds with a bachelor's degree is now the highest it's been in over a decade (not counting the pandemic). At the same time, apartment REITs like Equity Residential are down about 18% this year as many young people move back home or look for cheaper housing.⁵

Overall, these trends point to softer near-term growth in the consumer discretionary sector as young adults cut back on dining, and travel. Frankly, I believe that there is a lot of macroeconomic uncertainty with the current administration and that has manifested itself into consumers being hesitant about their discretionary purchases.

Valuation

Revenue Assumptions

Gross Booking Value (GBV)

Gross booking value (GBV) measures the total dollar value of all bookings made through Airbnb's platform before deducting host payouts or service fees. It's the company's main indicator of overall demand and activity, with Airbnb earning a percentage of this amount, known as the take rate, to generate revenue. Historically, GBV has tracked closely with travel demand, rising as more guests use the platform across homes, experiences, and now hotels.

In our model, we project GBV to grow at roughly a 8% CAGR from 2025 to 2027, driven by Airbnb's expansion into hotels and continued strength in international markets. Management's tone has turned more assertive, with CEO Brian Chesky stating in Q2 2025 that Airbnb plans to move into hotels "significantly more aggressively." We also expect AI integration within search and pricing to lift conversion rates and average booking values over time.

The key question for investors is how effectively Airbnb can scale its hotel segment without diluting its core short-term rental business. While the global hotel market is nearly twice the size of the alternative accommodations market, execution and user adoption remain critical. Our model assumes strong near-term growth but becomes more conservative later in the forecast to account for uncertainty around hotel penetration and consumer response.

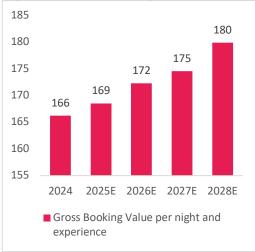

Nights and Experiences Booked

Nights and Experiences Booked represent the total number of nights and experiences reserved through Airbnb's platform. This metric is a key driver of revenue, as when multiplied by the average daily rate (ADR), it determines total gross booking value. Airbnb breaks this

Source: HF Model

Figure #23: GBV per night (ADR)

Source: HF Model

Figure #24: Average Nights per Booking

down by region (North America, EMEA, Latin America, and Asia Pacific), making it one of the best indicators of user activity and travel demand.

We forecast Nights and Experiences Booked to grow on average around 5% annually from 2025 to 2027, supported by expanding hotel supply and strong international demand. Airbnb Experiences should also see renewed growth as the company improves marketing and integrates AI-driven personalization to boost attach rates during the booking process.

The main uncertainty is how long this level of growth can persist as global travel normalizes, and competition stays high. While management has made meaningful progress expanding hotel listings, it will take time before this new vertical materially contributes to overall platform volume.

Average Daily Rate (ADR)

Average Daily Rate (ADR) represents the average price per night paid by guests on Airbnb's platform. It is a key driver of revenue growth and an indicator of pricing power, as small increases in ADR can have a large impact on profitability given Airbnb's asset-light model. ADR trends are influenced by mix shifts between regions, types of listings, and booking duration, as well as broader macroeconomic factors like inflation and consumer spending.

In our model, we forecast ADR to grow modestly at around 2% per year through 2027, supported by continued strength in premium listings, steady consumer demand, and Al-assisted pricing optimization. Longer stays and higher-end properties remain popular among travelers, while the integration of hotels into the platform should help lift overall ADR as Airbnb captures more traditional hospitality spend.

While inflation and new tariffs are expected to cause a temporary uptick in costs during the second half of 2025, we anticipate only a mild impact on ADR growth compared to prior inflation cycles. Over the long term, pricing improvements should be driven more by product mix and technology than by broad price hikes. Our assumptions reflect stable, sustainable ADR growth consistent with a maturing platform that continues to attract both value-seeking and higher-income travelers.

Cost Assumptions

We forecasted Airbnb's expenses using a mix of revenue-based ratios, and activity drivers tied to booking growth. Airbnb has an asset-light business model, where most costs move with platform activity rather than physical assets.

Cost of Revenue

In 2024, cost of revenue was \$1.88 billion, or 16% of revenue, up 10% year over year. The increase came mostly from higher merchant fees and cloud computing costs, partly offset by fewer chargebacks.⁶ We

Source: HF Model

modeled this line as roughly 16.9% of revenue going forward, staying constant.

Operations and Support

Operations and support totaled \$1.28 billion in 2024, about 12% of revenue, and grew 8% from 2023 due to customer relations, and insurance costs. We kept this around 11.5% of revenue in the forecast since it scales closely with booking volume and guest activity. Some small margin improvements could show up as customer service automation improves.

Note: Airbnb's income statement does not break out operations and support separately; this detail only appears in the notes to the financial statements. For standardization, we combined cost of revenue and operations and support in our model and forecasted them together at approximately 28% of revenue. However, we slightly decreased to 27% as management focuses on cost cutting initiative.

Product Development

Product development expense rose 19% to \$2.06 billion (around 19% of revenue) in 2024, driven mainly by higher engineering payroll. We assumed 19% of revenue for this category. We kept product development flat as a percentage of revenue to reflect steady investment in technology and AI initiatives. However, reflecting AI spending and research we believed it was important to grow this figure by 1% of revenue eventually reaching 21% by 2027.

Sales and Marketing

Sales and marketing grew 22% in 2024 to \$2.15 billion, or about 19% of revenue, mainly from higher brand and performance marketing spend. We modeled this at 10.7% of revenue in 2024, declining modestly in later years as Airbnb benefits from repeat guests and organic traffic.

General and Administrative (G&A)

G&A fell sharply from \$2.03 billion in 2023 to \$1.19 billion in 2024 (down 41%), mostly due to the one-time Italy tax settlement recorded in 2023. We normalized G&A at 18.3% of revenue, excluding that one-time item, and let it rise slightly over time with payroll and compliance costs.

Note: Airbnb's income statement does not break out Sales and Marketing and General and Administrative separately; this detail only appears in the notes to the financial statements. For standardization, we combined into a single SG&A line item and forecasted them together at approximately 30% of revenue.

Depreciation and Amortization

Depreciation and amortization are tied mainly to internally developed software and acquired technology since Airbnb doesn't have a large physical asset base. We modeled this using an average implied depreciation rate 17% then multiplied by beginning net PP&E.

Other Income (Expense)

Interest income is modeled based on Airbnb's short-term investments multiplied by 3.6%, which reflects the 1-year U.S. Treasury yield. Interest expense is held constant at zero, even though the company has debt on its balance sheet. This is because Airbnb's \$2.0 billion convertible senior notes due 2026 carry a 0% coupon, meaning the company does not make any cash interest payments. Any reported interest expense is minimal and only reflects the small amortization of issuance costs associated with the notes. Other income and noncontrolling interests are kept in line with historical averages.

Taxes

I used an effective tax rate of 21%, in line with Airbnb's 2024 effective rate.

CapEx Assumptions

Airbnb's capital spending is relatively low given that it has asset-light business model. Most CapEx relates to internally developed software, IT infrastructure, and office improvements, rather than large physical assets.

In 2024, property and equipment totaled \$288 million gross and \$147 million net after depreciation. Depreciation was \$50 million for the year.

We used FactSet forecasts through 2030 and then assumed CapEx stabilizes at about \$59 million annually, which represents the seven-year historical average. This level reflects steady reinvestment in the platform and ongoing product development.

We expect CapEx to remain under 1% of revenue through the forecast horizon, consistent with historical trends.

WACC Calculation

We estimate Airbnb's WACC at 9.45%, reflecting its low leverage and asset-light business model.

Ex Cost of Equity

Using the CAPM, we applied a 4.04% risk-free rate, 5.0% equity risk premium, and 5-year beta of 1.11, resulting in a cost of equity of 9.59%.

Cost of Debt

The pre-tax cost of debt is 5.70%, with a 21% tax rate bringing the after-tax cost of debt to 4.50%. Actual cash interest is zero since Airbnb's \$2.0 billion convertible notes carry a 0% coupon.

Capital Structure

We weight these costs by market value, with equity making up 97.2% and debt 2.8% of firm value.

DCF/EP

We value Airbnb using both a discounted cash flow (DCF) and economic profit (EP) framework, applying the same cost of capital and terminal growth assumptions in both models.

Figure #25: Management CapEx Guidance

Our forecast projects free cash flow rising from \$2.9 billion in 2025E to \$6.3 billion in 2034E, supported by strong gross booking value growth, margin expansion, and disciplined expense management. The DCF model results in an operating asset value of \$72.8 billion. After accounting for non-operating assets and liabilities, we arrive at an equity value of \$78.1 billion, or an implied intrinsic value of \$135.81 per share.

The EP model produces a total present value of economic profit of 72.7 billion and the same 135.81 per share implied price.

Relative Multiple

We benchmark Airbnb against large-cap travel and lodging peers, including Expedia (EXPE), Booking Holdings (BKNG), Marriott (MAR), and Hilton (HLT). On a forward basis, peers trade at an average of 24.8x 2025E P/E, 21.7x 2026E P/E, and 15.8x EV/EBITDA.

Airbnb currently trades at 30.2x 2025E P/E, 26.1x 2026E P/E, and 24.0x EV/EBITDA, representing a clear premium to the group. Applying peer averages to Airbnb's 2025–2026 forecasts produces an implied value range of \$88–\$105 per share, with PEG-based multiples suggesting higher valuations near \$230 per share.

The premium relative to peers is largely justified by Airbnb's higher expected EPS growth of 15.8%, and asset-light business model that helps margins.

Henry Fund vs. The Street

Our estimates for Airbnb are generally in line with consensus in the near term but begin to diverge further out as we model stronger longterm margin expansion and steady gross booking value (GBV) growth.

For 2025, we forecast EPS of \$4.22, in line with consensus at \$4.22. By 2026, we project EPS of \$4.88 versus the Street's \$4.79, reflecting slightly higher take rate assumptions. Over the longer term, we estimate 5-year EPS growth of 15.8% annually from 2025–2030, compared to the Street's expectation of 4.2%.

On EBITDA, consensus expects \$3.3 billion in 2025E and \$4.1 billion in 2026E, while our model forecasts \$3.1 billion and \$3.8 billion, respectively. The difference mainly reflects our view of more reinvestment in product development and marketing.

On valuation, FactSet consensus shows a mean target price of \$137.21 (rating: Hold), implying 7.5% upside from current levels. Our blended valuation approach (DCF, DDM, and relative) suggests a range of \$130–155 per share.
